FORTE TECHNOLOGIES

PROTECTIVE & INDUSTRIAL COATING SPECIALISTS

OUR PROMISE TO YOU

"To provide you with real Value, outstanding service, and exceptional performance regardless of the size or complexity of your project on industrial or protective coating."

Protect. Restore. Perform.

Forte Technologies
Protective & Industrial Coating Specialists

ABOUT US

FORTE Technologies is a family-owned industrial coating company established in 2020, specialising in protective coatings, industrial coatings, industrial floor coatings and industrial refurbishment.

We partner with industrial and commercial clients to protect assets, restore surfaces and enhance long-term performance. Combining technical knowledge, experienced application resources and a practical project-execution approach, we deliver solutions tailored to each project's requirements.

OUR VISION

- **To be a trusted name in protective and industrial coating solutions, recognised for quality, reliability and lasting performance.**

OUR MISSION

- **To deliver practical, performance-driven coating solutions through technical expertise, quality workmanship, safe execution and strong customer relationships.**

Forte Technologies
Protective & Industrial Coating Specialists

OUR CORE **COMPETENCE**

Surface preparation

If the products of the corrosion reactions and other contaminants were left on a substrate and paint applied over them, the adhesion of the coating and thus the coatings life would be far from satisfactory. Surface preparation involves removing these contaminants and, in some instances, increasing the area available for adhesion by roughening up the substrate.
(A) Dry abrasive blast cleaning (B) Water blasting (C) Hand tool cleaning (D) Power tool cleaning

Anticorrosive coatings

Anticorrosive coatings, also known as corrosion-resistant coatings or rust preventive coatings, are specially formulated materials applied to the surface of various objects or structures to protect them from corrosion. Corrosion refers to the gradual deterioration and damage caused by chemical or electrochemical reactions between a material and its environment, typically involving moisture, oxygen, and other corrosive substances.

Protective coatings

Protective coatings are materials applied to surfaces to provide protection against various types of damage, including corrosion, wear, abrasion, chemical exposure, weathering, and UV radiation. These coatings act as a barrier between the substrate and its surrounding environment, preserving the integrity and extending the lifespan of the object or structure.

Thermal insulation coatings

Thermal insulation coatings are specialized coatings designed to reduce heat transfer through surfaces, such as walls, roofs, pipelines, or equipment. They are used to improve energy efficiency, reduce thermal conductivity, and provide insulation in various applications.

Forte Technologies
Protective & Industrial Coating Specialists

Industrial coatings

We provide industrial coating solutions designed to protect equipment, machinery, metal components and industrial structures against corrosion, abrasion, chemical exposure and demanding operating conditions. Our approach focuses on selecting suitable coating systems based on substrate conditions, service environments and performance requirements, supported by proper surface preparation and controlled application practices to enhance durability, protect assets and extend service life.

Fireproofing

Fireproofing coatings, also known as fire-resistant coatings or intumescent coatings, are materials applied to surfaces to increase their resistance to fire and prevent the spread of flames. These coatings are specifically designed to provide a protective barrier that delays the onset of structural failure and limits the damage caused by fire.

Project execution

We deliver industrial coating projects through coordinated planning, resource mobilisation, surface preparation, coating application and quality control. Our execution approach focuses on technical specifications, application procedures safety and project schedules to ensure consistent workmanship and reliable project delivery—from initial mobilisation to final handover.

Industrial refurbishment

We specialise in the refurbishment and recoating of industrial structures, equipment and facilities to restore surface integrity and extend asset service life. Our services include corrosion treatment, surface preparation, coating removal, surface repairs and application of protective coating systems to deteriorated assets, helping minimise further deterioration and reduce the need for premature replacement.

INDUSTRIAL FLOOR COATINGS

Durable. Hygienic. Performance-Driven.

Industrial floors must withstand demanding operating conditions, from heavy traffic and chemical exposure to strict hygiene and electrostatic control requirements. At FORTE Technologies, we provide specialised flooring solutions selected to meet the functional, operational and performance needs of industrial and commercial facilities.

OUR FLOORING SOLUTIONS

EPOXY FLOORING

Durability | Seamless Finish | Chemical Resistance

Epoxy flooring provides a durable, seamless and easy-to-maintain surface for industrial and commercial environments. Depending on the selected system, it offers resistance to abrasion, impact and chemical exposure.

ESD FLOORING

Static Control | Operational Protection | Specialised Performance

Electrostatic Discharge (ESD) flooring systems help control the generation and dissipation of static electricity when correctly designed, installed and tested as part of an appropriate grounding system.

FOOD-GRADE EPOXY FLOORING

Hygienic Surfaces | Easy Cleaning | Chemical Resistance

Food-grade epoxy flooring systems are designed for facilities where hygiene, cleanability and resistance to routine cleaning chemicals are important. The selected system should meet the facility's applicable hygiene, regulatory and operational requirements.

MMA FLOORING

Rapid Installation | Fast Return to Service | Versatility

Methyl Methacrylate (MMA) flooring systems offer rapid curing, enabling floors to return to service quickly when installation time is critical. System selection depends on the substrate, operating conditions and required performance.

CEMENTITIOUS PU FLOORING

Thermal Shock Resistance | Heavy-Duty Performance | Hygiene

Cementitious polyurethane flooring is designed for demanding environments exposed to temperature variations, moisture, mechanical stress and aggressive cleaning regimes. It is particularly suitable for facilities requiring durable, hygienic flooring.

HIGHLY TRAINED OPERATIVES

- At Forte technologies, all our staff are fully trained to the highest of standards with certified inspectors in specialist coatings. And a well experienced technical team to ensure minimal downtime and non-stop working.
- This combination of Experience supervisory staff, and certified technical team will make sure the smooth running of the day to day operations, throughout the life of the project.
- All our machines and equipment's are compliance with internation- al standard, and from Internationally approved manufacturers.
- Our application and supervision team are well trained on working on scaffolding, cradles, aerial work platforms or even rope access. Their knowledge of industrial coatings and surface preparation standards ensure protective coatings are correctly applied.
- Prior to the application of any paint or protective coating system, we are able to undertake a full assessment of the associated areas to determine the current condition of the substrate surfaces.
- Following the initial assessment, we offer a variety of surface preparation services, this also helps to ensure that the maximum life of the new coating system product is maintained.

OUR QUALITY COMMITMENT

Quality in Every Layer. Confidence in Every Project.

- At FORTE Technologies, quality is fundamental to every project we undertake. We are committed to delivering coating and flooring solutions that meet agreed specifications, customer requirements and applicable industry standards.
- Our quality approach begins with proper surface preparation and suitable system selection, followed by controlled application, technical supervision and appropriate quality checks at every critical stage. We emphasise workmanship, material compliance, adherence to application procedures and accurate project documentation to achieve consistent and reliable results.
- Through continuous improvement, responsible execution and attention to detail, we strive to enhance asset protection, extend service life and build lasting customer confidence.

Our commitment is simple: to deliver quality through the right preparation, the right application and the right execution.

SAFETY

FORTE TECHNOLOGIES IS DEDICATED TO PROTECTING AND PRESERVING THE WORKING ENVIRONMENT IN A RESPONSIBLE MANNER – WE ARE VERY PROUD OF HOW WE WORK AND OUR SAFETY TRACK RECORD.

- When it comes to safety, our philosophy is that any successful job or project is directly attributed to exceptional performance and well-planned services. Our unmatched safety record is a result of avoiding less than desirable workmanship and errors associated with rushing, stress, and poor work conditions. The majority of incidences are attributed to human error, thus minimizing or eliminating such conditions results in fewer incidents.

- Forte technologies management is committed to continuous development and improvement of safety programs to protect our team members on all job sites. We also acknowledge that our company's staff and professionals are our biggest asset. We are proud of our safety record, and continue to strive to make our facilities and job sites safer. We will never compromise the safety of our staff, equip- ment or our customers.

OUR INTERNAL SAFETY PROGRAM INCLUDES:

- A daily job hazard analysis meetings.

- All staff and team members are trained to look at safety before beginning any task to reduce risk.

- All team members are routinely trained and updated on the best industry safety practices.

- All new team members are extensively trained before beginning as an active member of Forte technologies team.

- All team members are rewarded for operating in a safe andproductive manner.
